

CONTENTS

PREFACE *xv*

CHAPTER 1 **What Is Game Theory?** 1

A. **The Goal of This Book** 1

1. Baseball stadium model example 1
2. Applied models vs. pure theory 2
3. Applied models and empirical testing using experiments 2
4. A simple and not very good experiment 3
5. Behavioral game theory and ultimatum bargaining 4
6. New technology used to disprove and improve old theories 5

B. **What Is a Game?** 7

1. Game theory as an interdisciplinary method 7
2. Game theory and equilibrium 7
3. A game in von Neumann's sense 9
4. Game theory and the importance of assumptions 10
5. Rationality and self-interest in a curved exam example 10

C. **Behavioral Assumptions** 11

1. What is rationality? 11
2. Why is rationality needed? 12

D. **Behavioral Game Theory** 14

1. Research methods of behavioral game theory 14
2. Historical developments in behavioral game theory 15

E. **Different Types of Games** 16

1. Cooperative vs. noncooperative games 16
2. Competitive vs. noncompetitive games 17
3. Normal form vs. extensive form games 17

4. Pure vs. mixed strategy games 18
5. Single-shot vs. repeated games 18
6. Complete and perfect information vs. incomplete and imperfect information 18

F. Summary 19

CHAPTER 2 What Are Laboratory Experiments? 21

A. Why Experiments? 21

1. Ben Franklin's clothes experiment 21
2. The need for experiments and the growth of experiments 22

B. Defining a Laboratory Experiment 24

1. What is a laboratory and how does it differ from the field? 24
2. What is the definition of an experiment? 25

C. Establishing Causality 26

1. Randomization of subjects to treatments and experimental controls 26
2. Example of the importance of randomization of subjects to treatments 28
3. Experimental controls and confounding factors 29
4. Baseline comparisons and controlling for confounding factors 31

D. Experimental Validity 32

1. Differences among external, internal, and ecological validities 32
2. Artificial vs. natural environments 33
3. Problems with external validity 34
4. Problems with internal validity 35
5. Benefits of an artificial environment 36

E. Experimental Methods 36

1. Subject motivations 37
2. Deception 37
3. Experimental environment 38
4. Number of trials 38
5. Between-subject vs. within-subject design 38
6. Anonymity 39
7. How do you design a good experiment? 39

F. Summary 40

CHAPTER 3 Ordinal Utility Theory 42

A. Too Many Choices? 42

B. Strict Rationality 43

- C. Utility Theory 44**
 - 1. Utility 44
 - 2. Graphical utility functions 44
- D. Ordering Alternatives 47**
 - 1. Restrictions on choice 47
 - 2. May's intransitive preferences experiment 47
 - 3. Choice and time 48
 - 4. Nonperverse selection rule and exhaustive set of alternatives 48
 - 5. Ariely's *Economist* experiment 49
- E. Ordinal Utility Functions 49**
- F. Spatial Preferences in One Dimension 50**
 - 1. Modeling ideology 50
 - 2. Single-peakedness and transitivity 51
- G. How Utility Functions for Money Are Induced in Political Economy Experiments 53**
 - 1. Payoff charts 53
 - 2. Spatial payoffs 54
- H. Rationality, Emotions, and Social Preferences 55**
 - 1. Rationality and emotions 55
 - 2. Rationality used to study other types of behavior via deviations 56
 - 3. Social preferences defined 57
 - 4. Example of a social utility function 58
- I. Summary 60**

CHAPTER 4 **Expected Utility Theory 61**

- A. Expected Utility 61**
 - 1. Expected value and slot machines 61
 - 2. The St. Petersburg paradox 62
- B. Expected Utility Theory 63**
 - 1. Using cardinal values in a utility function 63
 - 2. Preferences over lotteries vs. preferences over outcomes 64
 - 3. Further restrictions on choice 65
 - 4. Calculating expected utility 66
- C. Modeling Risk 68**
 - 1. What is risk? 68
 - 2. Modeling risk-averse vs. risk-acceptance behavior 68
- D. Framing Effects and Alternative Theories of Risk 70**
 - 1. Framing 70
 - 2. Prospect theory 71

- 3. Regret theory 72
- E. Anomalies to Expected Utility Theory 73
 - 1. The Ellsberg paradox 73
 - 2. Framing and reference points 73
 - 3. Time inconsistency 74
- F. Alternative Theories to Expected Utility Theory 75
 - 1. Bounded rationality 75
 - 2. The BPC model 76
- G. Binary Lottery Experiments 76
- H. Summary 77

CHAPTER 5 Solving for a Nash Equilibrium in Normal Form Games 79

- A. *In Cold Blood* 79
- B. Beliefs and the Common Knowledge Assumption 80
- C. Nash Equilibrium 80
 - 1. Defining a Nash equilibrium 80
 - 2. Nash equilibrium behavior in other examples 82
 - 3. He-thinks-I-think regress 83
 - 4. Pareto principle 84
 - 5. Nash equilibrium in a zero-sum game 84
- D. Prisoner's Dilemma 84
- E. Elimination of Dominated Strategies and a Dominant Solvable Equilibrium 86
- F. Three-Player Normal Form Games 88
- G. Eliminating Dominated Strategies in an Election Game 89
- H. Finding Dominate Strategies in a Spatial Election Experiment 90
- I. Other Experimental Tests of Dominant Strategies 91
 - 1. Tversky and Kahneman's dominant strategy experiment 91
 - 2. Beauty contest 92
- J. Summary 93

CHAPTER 6 Classic Normal Form Games and Experiments 95

- A. Classic Normal Form Games 95
- B. Revisiting the Prisoner's Dilemma 95
 - 1. Repeated prisoner's dilemma game 95
 - 2. Example of finite repeated game with reciprocity strategies 97
 - 3. Axelrod's tournament 98
 - 4. Prisoner's dilemma as a route-choice game 99

- C. **Social Dilemmas** 99
 - 1. Collective goods problem 99
 - 2. Collective goods experiment 100
 - 3. Volunteer dilemma 101
- D. **Chicken Games and Brinkmanship** 102
 - 1. Chicken run 102
 - 2. Brinkmanship and the Cuban missile crisis 102
 - 3. Hawk-dove game 103
 - 4. Acme-Bolt truck experiment 104
- E. **Battle of the Sexes Game and Coordination Games** 106
 - 1. Classic story of the battle of the sexes 106
 - 2. Coordination in a matching pennies game 106
 - 3. Focal point equilibrium 107
- F. **Stag Hunt or Assurance Games** 108
 - 1. The Rousseau game and risk-dominant equilibrium 108
 - 2. Quorum-busting 108
 - 3. Experiment on stag hunt game: Communication and trust 109
 - 4. Coordination and elites 110
- G. **Summary** 110

CHAPTER 7 Solving for Mixed Strategy Equilibrium 112

- A. **Rock, Paper, Scissors** 112
- B. **Calculating Mixed Strategies** 113
 - 1. Spades-hearts game 113
 - 2. Mixed strategy equilibrium for spades-hearts game 115
 - 3. Why would a player use a mixed strategy? 118
 - 4. Mixed strategy equilibrium for the battle of the sexes game 119
- C. **Experimental Tests of Mixed Strategy Equilibrium** 120
 - 1. O'Neill's experiment 120
 - 2. Ochs' experiment 122
- D. **Probabilistic Choice Models** 122
- E. **Testing Mixed Strategies Using Observational Data** 124
 - 1. Soccer players and mixed strategies 124
 - 2. Tennis players and mixed strategies 124
- F. **Summary** 125

CHAPTER 8 Extensive Form Games and Backward Induction 126

- A. **The Twenty-One Coin Game** 126
- B. **Defining an Extensive Form Game** 126

- 1. Follow-the-leader game redux 126
- 2. Formal definition of extensive form game 128
- 3. *Twilight* example 129
- 4. Three Stooges game 131
- C. Backward Induction 132**
- D. The Importance of the Order in which Players Move 134**
 - 1. First mover's advantage and the chicken game 134
 - 2. First mover's advantage and a collective good game 135
 - 3. Second mover's advantage and RPS game 136
- E. Backward Induction and the Need for Refinement 137**
- F. Experiments on Backward induction Reasoning 138**
 - 1. Race game 138
 - 2. Race game and chess players 140
- G. Summary 141**

CHAPTER 9 Subgame Perfect Equilibrium 142

- A. Credible vs. Noncredible Threats 142**
- B. Subgame Perfect Equilibrium 143**
 - 1. Subgames 143
 - 2. Threat game 144
 - 3. Strategy mappings and Rasmussen's outdated computer disk game 145
 - 4. Player 1 moves twice game 147
 - 5. Kreps and Wilson's up-down game 149
- C. Subgame Perfect Equilibrium and the Need for Refinement 150**
- D. Centipede Game 150**
 - 1. How the centipede game is played 150
 - 2. Centipede, reputations, and quantal response equilibrium 151
 - 3. Centipede and chess players 152
- E. Ultimatum Bargaining Games 153**
 - 1. Ultimatum bargaining and problems with subgame perfect equilibrium 153
 - 2. Ultimatum bargaining and communication 153
 - 3. Bargaining with social preferences turned off 154
 - 4. Ultimatum bargaining and cultural effects 154
 - 5. Physical attraction and ultimatum bargaining 155
- F. Trust Games 156**
- G. Neuroeconomics 157**
- H. Wait a Minute, Are These Really Social Preferences? 158**
 - 1. Manufactured social preferences 158

	2. Strategic ignorance	158
	I. Summary	159
CHAPTER 10	Imperfect and Incomplete Information Games	160
	A. The Structure of Imperfect and Incomplete Information Games	160
	1. Infatuation and fickle games	160
	2. Disney movies and incomplete and imperfect information	161
	B. The Structure of Incomplete Information in Game Trees	163
	1. Matching pennies and information sets	163
	2. Varied information sets in a guessing game	163
	3. Restrictions placed on information sets	167
	C. Incomplete Information over Player Types	169
	D. Sequential Rationality	170
	1. Establishment of beliefs and restrictions placed on beliefs	170
	2. Deriving a sequential equilibrium	171
	E. Signaling Games	173
	1. Truth-lying game	173
	2. Truth-lying and games of conflict and common interest	175
	3. Calculating a sequential equilibrium for the truth-lying game	176
	F. Sender-Receiver Framework Lying Experiment	178
	G. Persuasion Experiment	179
	H. Summary	181
CHAPTER 11	Bayesian Learning	183
	A. <i>The People of the State of California v. Collins</i> (1968)	183
	B. Conditional Probabilities	184
	C. Conditional Probabilities and the Beliefs of Video Game Characters	184
	D. Bayesian Learning	186
	1. What is learning?	186
	2. Updating beliefs	187
	3. Calculating Bayes' theorem	187
	E. Perfect Bayesian Equilibrium	190
	1. Weak consistency of beliefs	190
	2. Solving for a perfect Bayesian equilibrium	192
	3. Refinements to perfect Bayesian equilibrium	194
	F. Information Cascade Experiments	195
	G. Alternative Learning Models	198
	H. Equilibrium and Learning	199
	I. Summary	199

	Chapter Problem Sets	201
APPENDIX 1	Solving Linear Equations	233
APPENDIX 2	A Short History of Game Theory and Political Economy Experiments	235
APPENDIX 3	Sincere vs. Strategic Voting in Agenda Games	246
